Add Traditional Bare Metal Cluster

AutoTLS is currently not enabled. This means the over-the-wire communication is insecure. [Click here to setup Enable AutoTLS.](#)

A KDC is currently not configured. This means you cannot create Kerberized clusters. Kerberized clusters are required for Ranger, Atlas, and services that depend on them. [Click here to setup a KDC.](#)

Adding a cluster in Cloudera Manager consists of two steps.

1. Add a set of hosts to form a cluster and install Cloudera Runtime and the Cloudera Manager Agent software.

2. Select and configure the services to run on this cluster.

Solr

Apache Solr is a highly scalable, distributed service for indexing and relevance-based exploring of all forms of data.

Spark

Apache Spark is an open source cluster computing system. This service runs Spark as an application on YARN.

Streams Messaging Manager

Streams Messaging Manager (SMM) is an operations monitoring and management tool that provides end-to-end visibility in an enterprise Apache Kafka environment.

Streams Replication Manager

Streams Replication Manager (SRM) is an enterprise-grade replication solution that enables fault tolerant, scalable, and robust cross-cluster Kafka topic replication.

Tez

Apache Tez is the next generation Hadoop Query Processing framework written on top of YARN.

YARN

Apache Hadoop MapReduce 2.0 (MRv2), or YARN, is a data computation framework that supports MapReduce applications (requires HDFS).

YARN Queue Manager

YARN Queue Manager is the queue management user interface for Apache Hadoop YARN Capacity Scheduler.

Zeppelin

Apache Zeppelin is a web-based notebook that enables data-driven, interactive data analytics and collaborative documents with SQL, Scala and more.

ZooKeeper

Apache ZooKeeper is a centralized service for maintaining and synchronizing configuration data.
